

How Ecoer and its (ESS) Monitoring Benefits Homeowners:

- 1) The **true variable speed inverter compressor** creates the highest level of energy efficiency and performance in residential HVAC equipment. This provides ultimate comfort and quiet operation.
- 2) ESS allows the **contractor to monitor the homeowner's system performance in real-time, and make certain system adjustments remotely**, by using the Ecoer App, saving time and money. This savings is passed on to the homeowner!
- 3) ESS allows the **contractor to react immediately**, if there is a critical issue with the system. The contractor will know the issue and what is needed to fix it before coming out. This allows for faster and more accurate response time.
- 4) Our technology also enables **homeowners to review their energy savings and return on investment** with Quarterly Energy Reports direct from Ecoer. Our reports will help you understand how much you are saving; you won't have to guess or continue to try to figure out your complicated energy bill. We won't bother you with this report, however, unless you request it. Getting it is as easy as emailing your IoT gateway serial number (or a picture of the decal on the outside of the gateway) to support@ecoer.com.
- 5) **Homeowners can enjoy peace of mind** knowing they have a great 10 years Parts Warranty, access to an industry leading labor warranty, and that their system is being monitored 24/7 by Ecoer and their chosen contractor.
